PRODUCT REQUIREMENTS DOCUMENT

ItaBEES Talent Academy

Website Redesign & Admin Dashboard

PROJECT TYPE	PLATFORM	STATUS
Website redesign, interaction improvements and admin dashboard	Existing Wix website	Draft - audit completed; pending technical discovery and client approval

Website: www.itabeestalentacademy.com

Version 1.1 | Updated after public-site audit | November 2026

1. Project Overview

1.1 Purpose

Transform the existing ItaBEES Talent Academy website into a modern, engaging and professional sports talent development platform. The redesign should attract aspiring young athletes, communicate the academy's value, showcase coaches and programmes, and encourage visitors and parents to take action.

1.2 Problem Statement

The current website needs a stronger, more consistent visual experience. Buttons, typography, spacing, page layouts, navigation and quick links require investigation and improvement. The need for an administrative workflow to manage enquiries and follow-ups must also be assessed.

1.3 Project Goals

- Make the website visually compelling while preserving the existing brand identity.
- Improve presentation across all 25 existing pages with consistent, responsive UI components.
- Ensure navigation, links, buttons and forms work correctly.
- Put young athletes, coaches and development pathways at the centre of the experience.
- Provide a secure administrative process for managing enquiries and follow-up emails.

1.4 Public-Site Audit Baseline

The live sitemap currently exposes 9 pages, rather than the 25 anticipated in the initial scope. All exposed routes returned successfully, but the audit found high-priority conversion and content gaps: training CTAs lead to a page with no bookings; the Donate link leads to an empty Player Pathway page; the Player Pathway and one thank-you page are blank; footer quick links and social handles are not interactive; and contact email/phone details are plain text. These findings are implementation requirements, not optional future improvements.

2. Target Users

User group	Primary needs
Website members	Create a basic account, receive onboarding information and explore programmes without being treated as enrolled trainees.
Registered trainees	Access an authenticated profile, view their assigned training timetable and receive relevant programme communications.
Parents and guardians	Understand the mission, coaching approach, programmes, contact routes and enrolment steps.
Coaches and sports professionals	Review the academy philosophy and pathways, and find partnership or employment contacts.
Academy administrators	Manage public content, media, timetables, enquiries, communications and authorised user records.

3. Brand and Design Requirements

3.1 Brand Preservation

Retain the established ItaBEES colour scheme. Lemon-yellow and black button treatments must be used consistently; other brand colours should be confirmed from the live site before the design system is finalised.

3.2 Visual Direction

- Modern, athletic, energetic and youthful.
- Professional and trustworthy, visually rich without clutter.
- Consistent across all pages, accessible and easy to navigate.
- A serious sports development organisation - not a generic business website.

3.3 Typography & Layout

Adopt a modern readable font system with strong display headings, clear hierarchy, consistent scales and comfortable line spacing. Define shared rules for content widths, page margins, section spacing, image crops, cards, buttons, alignment and visual rhythm.

4. Public Website Functional Requirements

4.1 Homepage

The first screen must clearly communicate the academy mission without excessive scrolling. Feature young athletes, compelling sports photography, clear calls to action, development philosophy, relevant programmes, coaches, supported credibility indicators and routes to deeper information.

4.2 Athlete-Focused Presentation

Feature young athletes across heroes and content areas; portray training, teamwork, discipline, growth and achievement. Support the wider sports focus instead of positioning the academy as football-only.

4.3 Coaches

Use consistent coach imagery, improved profile layouts and readable biographies. Verify every qualification, experience statement and profile link.

4.4 Programmes & Development Pathways

Organise existing programme names, stages and milestones with clear headings, readable sections, obvious next steps and useful related-page links. Preserve approved names and descriptions.

4.5 Remaining Pages

Inventory all 25 pages before finalising implementation. For every page, record purpose, key content and CTA, layout findings, broken links/interactions, reusable components, redesign scope and functional verification.

5. Button and Interaction Requirements

5.1 Mandatory Primary Button Inversion

Button	Default	Hover
Lemon-yellow	Lemon-yellow background; black text and icon	Black background; lemon-yellow text and icon
Black	Black background; lemon-yellow text and icon	Lemon-yellow background; black text and icon

5.2 Behaviour

Buttons must have pointer cursors, smooth transitions, visible hover and keyboard focus states, appropriate pressed/disabled behaviour, correct actions, sufficient contrast and touch-friendly dimensions. Hover must not be the only interaction cue.

5.3 Links & Quick Links

Test main navigation, dropdowns, quick links, footer links and linked cards. Every intended link must be clickable and point to the correct destination; email and phone links must work where supported. Acceptance criterion: no known broken or non-functional links remain in the approved inventory.

5.4 Motion & Microinteractions

Use subtle reveals, image/card transitions, counters where appropriate, smooth navigation and consistent loading behaviour. Motion must never obstruct reading or interaction and should respect reduced-motion preferences.

6. Responsive Design

- Support desktop, tablet and mobile without unintended horizontal scrolling.
- Maintain readable text, correctly sized imagery and responsive navigation.
- Ensure grids/cards adapt, buttons remain touch-friendly and forms remain usable.
- Test every redesigned page at representative desktop, tablet and mobile widths.

7. Navigation and Information Architecture

Audit the main navigation, dropdowns, quick links and footer routes before changes. Identify duplicate, confusing or broken paths; make return-to-home and key actions obvious; maintain sensible relationships between programme pages. Any removal, renaming or reorganisation of existing pages requires client approval.

8. Admin Dashboard Requirements

8.1 Purpose

Provide authorised staff with a private area to manage enquiries and communicate with prospective athletes, parents and other contacts. Confirm whether this can be implemented securely within Wix during discovery.

8.2 Authentication & Access Control

Dashboard access requires authentication. Only authorised staff may access contact information, permissions must be role-appropriate, public visitors must not access administration data, and sensitive actions must be protected.

8.3 Contact & Enquiry Management

- Display available name, email, received date, source/category, enquiry message, follow-up status and last-contact date.
- Support search, filtering and record detail views.
- Use statuses: New, Contacted, Awaiting response, Follow-up required and Resolved.
- Show only data collected through the site or an authorised integration.

8.4 Email Communication

Enable authorised administrators to select a contact, compose a subject and message, review before sending, use an approved Wix integration/email service, show success or failure, and log date/status where supported. Do not claim email delivery merely because a send request was accepted. Bulk messaging is out of scope.

8.5 Follow-Up & Privacy

Staff should update status, mark contacted, record notes and identify records requiring attention. Limit collection to necessary data, secure records, provide form privacy information, respect consent/unsubscribe requirements and avoid public exposure of children's information.

8.6 Technical Feasibility

Confirm whether Wix Contacts, CRM, supported email tools, CMS collections or custom development meet requirements. Use the simplest secure approved architecture; do not assume contacts or email capability already exist.

8.7 Content and Media Management

Authorised content administrators must be able to update page copy, calls to action, headings, programme descriptions, coach profiles, page SEO fields and published media without developer intervention. They must be able to upload, replace, crop, caption and add alt text to images; organise reusable media; preview changes; and publish or schedule approved changes. Version history, drafts and restore capability should be used where supported. Only approved roles may publish public changes.

8.8 Newsletter and Communications

Administrators must be able to compose, save, preview, test, schedule and send monthly newsletters to opted-in recipients using an approved email provider. The system must manage consent, unsubscribe links, suppression lists and send status. It must distinguish transactional emails from marketing newsletters. Campaign reporting may include sent, delivered, bounced, opened and clicked status only where the provider reliably supplies it; accepted-for-send must not be reported as delivered.

9. Forms, Accounts, Registration and Training Timetables

9.1 Reach-Out Forms and Enquiry Records

Audit all enquiry, contact and application forms. Validate required fields, provide clear errors and submission confirmation, handle failures, prevent duplicates where practical and test mobile use. Every successful reach-out must create or update a protected enquiry/contact record in the admin panel, capturing only consented information, form source, received date, message, status, assigned administrator and follow-up history. Publicly visible email and phone details must use functional mailto and tel links where appropriate.

9.2 Account Types and Access

The platform must maintain a clear difference between a website member and a registered trainee. A website member creates an account or subscribes with an email address; they can manage their profile and explore public offerings but must not see trainee-only schedules or records. A registered trainee is a member whose approved training registration is associated with a programme, sport and timetable. Parent/guardian access must be considered for minors and must not expose another trainee's information.

9.3 Member Welcome Journey

When a website member signs up with an email address, send a transactional welcome email that confirms the account or subscription and includes one clear, tracked button labelled Register for Training. The button must direct the recipient to the live training-registration flow. The journey must handle invalid emails, existing accounts, delivery failure and unsubscribed marketing preferences appropriately. Do not send newsletter marketing without the required consent.

9.4 Training Registration

The training-registration flow must collect approved programme, sport, participant and guardian details, validate required fields, prevent accidental duplicates where practical, show a clear confirmation state and create or update the trainee record only after the approved registration workflow completes. It must not promise a training place unless availability and approval rules support that promise.

9.5 Admin Timetable Management

Authorised administrators must be able to create, edit, cancel, publish and archive training sessions. Every session must be categorised at minimum by date, start time, end time, sport type, programme/group, venue or online location, capacity/status and assigned coach where available. Administrators must be able to apply changes to an individual session or a recurring series, preview the timetable, and notify affected trainees when material schedule changes occur.

9.6 Trainee Profile Timetable

Each registered trainee must see only their own upcoming timetable after secure sign-in. The profile should present sessions in chronological order and allow filtering by date and sport type. Each session must show date, time, sport type, programme/group, venue and status. Cancelled or changed sessions must be clearly marked. The profile should show an empty state when no sessions are assigned and must not expose staff notes, other trainees or administrative data.

10. Performance, Accessibility and SEO

10.1 Performance

- Optimise image sizes where practical; avoid unnecessary scripts and animation.

- Minimise layout shifts and keep interactions responsive.
- Test page loading on mobile connections.

10.2 Accessibility

- Maintain contrast, keyboard navigation and visible focus indicators.
- Use sound heading structure, meaningful alt text and non-colour-only cues.
- Respect reduced-motion preferences where supported.

10.3 Search Engine Optimisation

- Preserve URLs where possible; review page titles and meta descriptions.
- Maintain heading hierarchy, improve alt text and check internal links.
- Avoid removing indexed content; review redirects for approved URL changes.

11. Technical and Platform Requirements

The website is managed through Wix. Before development, identify Wix Editor or Wix Studio, page structures and reusable components, forms/integrations, AI editing capabilities, collaborator permissions, preview/backup/publishing workflow and the supported dashboard approach. Prefer Wix-native capabilities; use custom code or services only when required and approved. Do not assume the site can be freely rebuilt as a conventional React application.

12. Scope and Deliverables

12.1 Included

- Audit of all 25 existing pages and approved visual direction.
- Typography/layout system, consistent button interactions, navigation/quick-link improvements and responsive enhancements.
- Appropriate microinteractions, preservation of existing content/functionality, and testing of pages, links, forms and interactions.
- Secure admin content/media management, enquiry records, follow-up workflow, newsletters and communications controls.
- Member/trainee role separation, welcome-email journey, training registration, administrator-managed timetables and trainee timetable profiles.
- Dashboard requirements documentation, plus approved implementation subject to feasibility confirmation.

12.2 Excluded Unless Separately Approved

- Complete content rewrites, new programmes/services, original photography or video, native mobile apps.
- Complex athlete scoring/recruitment systems, payment systems, new bookings, advanced marketing automation or CRM migration.
- Third-party subscription fees and unlimited future changes.

13. Acceptance Criteria

- All 25 agreed pages reviewed and updated; existing brand colours preserved.
- Lemon and black buttons follow inversion behaviour with working transitions.

- Broken links/quick links corrected; footer links, email links and phone links are functional.
- Training and donation CTAs lead to working, correctly labelled experiences; previously blank routes and thank-you flows are corrected or intentionally removed with redirects.
- Reach-out submissions create protected admin records; forms submit with appropriate feedback.
- Member and trainee roles are enforced; welcome email sends the approved training-registration CTA; trainee profiles show only their assigned, date/time/sport-categorised sessions.
- Authorised admins can manage content/media, timetable data, enquiries and compliant monthly newsletters.
- Required functionality retained; desktop, tablet and mobile testing completed; no known critical layout/interaction defects remain.
- Client reviews preview and approves launch.

14. Implementation Plan

Phase	Core activity
Phase 1 - Discovery & Audit	Obtain Wix access; identify editor/integrations; reconcile the 9 live routes with the intended 25-page scope; fix audit-critical journeys; confirm data, roles and dashboard requirements.
Phase 2 - Design System	Confirm typography; define colours/button variants; establish layout/spacing rules; define reusable patterns.
Phase 3 - Public Experience	Redesign home and remaining pages; correct CTA routes, footer/contact links and confirmation flows; improve athlete imagery; approve direction.
Phase 4 - Accounts & Training	Implement member/trainee role model, welcome email and registration flow; build admin timetable management and secure trainee profile schedules.
Phase 5 - Admin Operations	Implement controlled content/media editing, enquiries, notes/statuses, newsletter workflow, publishing controls and approved email integration.
Phase 6 - QA & Launch	Test role boundaries, schedules, pages, buttons, links, forms, emails and newsletter compliance; verify mobile; resolve defects; obtain approval and publish through Wix.

15. Open Questions

- Which of the 9 live sitemap routes should remain, be populated, be redirected or be removed, and what are the missing intended pages?
- Which form fields, consent language and retention period have been approved for enquiries, member accounts and trainees?
- Does the academy use Wix Contacts, a CRM, Wix Bookings, Wix Members Area or an email marketing platform today?
- What precise permissions are needed for content editors, timetable managers, communications staff and publishers?
- Who approves a trainee registration, assigns a trainee to a programme and can view a minor's timetable?
- What sports, programme groups, venues, recurrence rules and cancellation policies must the timetable support?
- What newsletter sender identity, monthly cadence, consent source and approval workflow are required?
- What are the budget, launch deadline, included revision rounds and final approval/publishing owner?

16. Success Metrics

- Completed enquiry/application submissions, training registrations and primary CTA click-through rate.
- Engagement with programme and coach pages.
- Member-to-training-registration conversion and welcome-email CTA clicks.
- Timetable profile use, schedule-change delivery and administration time to publish/update sessions.
- Newsletter subscription health, deliverability and engagement where compliant analytics are available.

- Mobile usability, page performance, broken links and critical defects after launch.
- Administrator time to review and follow up on enquiries.

FINAL PROJECT PRINCIPLE

The objective is not simply to make the website look different. It is to create a compelling, responsive and functional sports talent development website that helps young athletes and their families understand ItaBEES, explore programmes, trust the coaching team and take the next step. The public website and dashboard are related but distinct deliverables, each with clear requirements, secure functionality and measurable acceptance criteria.
